MOYINOLUWA DEBORAH ADIGUN

Frontend Developer

moyinoluwaadigun390@gmail.com | github.com/DevMoyin17 | adigun-moyinoluwa-portfolio.vercel.app

PROFESSIONAL SUMMARY

Frontend Developer with 2+ years of experience building production-grade web applications using React.js, Vue.js, and Tailwind CSS. Specializes in role-based access control (RBAC) systems, real-time dashboards, and API-driven interfaces. Cut page load times by 50% through efficient data-fetching strategies. Works effectively in agile teams, defining API contracts with backend engineers, conducting peer code reviews, and deploying via Vercel and GitHub. Seeking frontend roles at growth-stage startups, including remote opportunities.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3

Frameworks & Libraries: React.js (Hooks, Context API, React Router), Vue.js

Styling: Tailwind CSS, Bootstrap, Responsive Web Design

State & Data Fetching: React Query, React Context API

Backend & APIs: RESTful API Integration, Node.js, Express.js, JSON Server

Tools & Platforms: Git, GitHub, Vercel, Postman, VS Code

Auth & Security: JWT Authentication, Route Guards, Conditional Rendering

Practices: Agile/Scrum, Code Reviews, Version Control, RBAC Architecture, Mobile-First Design

KEY ACHIEVEMENTS

- **Cut page load time by 50%** by implementing React Query for data fetching, caching, and state synchronization, eliminating redundant API calls.
- **Shipped 100% responsive designs** across multiple production projects (Buyly, Crypto Tracker) using Tailwind CSS and Bootstrap.
- **Built 10+ production-ready feature modules**, including automated consultant-assignment logic and a searchable RBAC permissions interface.
- **Independently architected and shipped Buyly**, a full e-commerce platform with cart management, admin panel, category filtering, and mock payment integration, from design through deployment.

PROFESSIONAL EXPERIENCE

Frontend Developer | FloattHR, Softweb-digital Nov 2025 – Feb 2026

- **Engineered real-time admin and role-listing interfaces with React Hooks and React Query**, handling live data fetching, mutations, and optimistic UI updates at scale. This removed page reloads and gave admins instant visibility into account and role status.
- **Owned end-to-end delivery of the Admin Management dashboard**, covering profile editing, role reassignment, and Suspend/Activate workflows. This consolidated account lifecycle management into a single interface and removed the need for manual, multi-step admin processes.
- **Built the Consultant & Client Oversight module from scratch**, enabling direct assignments, Approve/Decline status workflows, and real-time request tracking, giving admins immediate visibility into consultant status without checking multiple systems.
- **Architected a full Role-Based Access Control (RBAC) system with CRUD operations and a searchable permissions interface**, enabling the platform to scale access control across growing user roles without rebuilding permission logic for each new role.
- **Designed state synchronization logic so UI updates instantly on consultant un-assignment and status changes**, removing full-page reloads and making the platform feel noticeably more responsive to end users.

- Partnered directly with backend developers to define and validate RESTful API contracts, and maintained code quality through structured Git/GitHub branching strategies and peer code reviews.

Frontend Developer | Buyly E-Commerce Platform, Personal Project Sep 2024 – Dec 2024

- **Independently designed and built a full e-commerce platform end-to-end**, including a product catalog, dynamic cart, admin dashboard, and simulated checkout. Covered the complete frontend ownership of a production-style app, solo.
- **Implemented category-based filtering, item detail pages, and client-side routing with React Router**, improving product discoverability and reducing the clicks needed to reach any product.
- **Built a real-time shopping cart with live price recalculation, quantity control, and item removal using React state and Context API**, requiring zero page refreshes and keeping interactions fast and fluid.
- **Built a full admin dashboard for product CRUD operations backed by a JSON Server REST API**, with instant frontend state updates on every change and no manual refresh needed to see results.
- **Achieved a fully responsive, mobile-first layout using Tailwind CSS utility classes**, delivering consistent UX across all device breakpoints from mobile to desktop.

Frontend Developer | Healthcare Management System, Freelance/Contract Team Jun 2024 – Dec 2025

- **Served as sole frontend developer on a 3-person freelance team**, owning all frontend architecture and implementation for a role-based healthcare platform spanning patients, doctors, and admins.
- **Built every frontend view and component in React.js, styled with Bootstrap**, consolidating what had been three disconnected user experiences into one consistent, responsive interface across all device types.
- **Integrated JWT-based authentication, appointment booking, and role-based routing end-to-end on the frontend**, delivering a secure experience tailored to each user type without backend rework.
- **Implemented protected route logic and conditional rendering based on authenticated sessions**, ensuring each role only ever saw functionality relevant to them and reducing the risk of unauthorized access by design.
- **Managed frontend deployment and integration via Git/GitHub** independently, including branching, merging, and coordinating code review with the rest of the contract team.

Frontend Developer | Cryptocurrency Tracker, Personal Project Jul 2025 – Aug 2025

- **Built a real-time cryptocurrency tracker in Vue.js**, consuming live data from the CoinGecko public API to display price, market cap, and symbol data across hundreds of coins simultaneously.
- **Built a dynamic search and filtering system from scratch**, letting users instantly query and compare any asset without page reloads or delays.
- **Designed a clean, mobile-first UI in Tailwind CSS**, including a dedicated coin detail view with extended stats accessible via click-through navigation from the main grid.
- **Added a live currency switcher and in-page refresh control**, keeping displayed data current in real time and improving perceived speed without a full data refetch cycle.

EDUCATION

Higher National Diploma, Crop Production Technology 2016 – 2022

Oyo State College of Agriculture and Technology, Igboora, Oyo State, Nigeria

ADDITIONAL INFORMATION

Availability: Immediate. Open to full-time, contract, and remote roles
